

Tech Lead / Engineering Manager hands-on

Tech Lead / Engineering Manager hands-on, specialised in **Angular**, **TypeScript strict** and **NestJS**, I support teams in designing robust business web applications, with high standards for **architecture**, **quality**, **delivery** and the controlled use of **AI assistance**.

KEY SKILLS

TECHNICAL LEADERSHIP & ARCHITECTURE

Technical Leadership · **Application Architecture** · **Technical Roadmap** · **Legacy Modernization** · Coaching · Technical decisions · Trade-offs

MANAGEMENT & DELIVERY

Engineering Management · **Delivery Management** · **Product Collaboration** · **Team Leadership** · Recruiting · Onboarding · Stakeholder Management

QUALITY & INDUSTRIALISATION

Code Review · **CI/CD** · **ESLint** · **Cypress / Playwright** · **Swagger / OpenAPI** · Prettier

FRONTEND

Angular · **TypeScript strict** · **RxJS** · **NgRx** · **Nx** · HTML / CSS

BACKEND & FULLSTACK

NestJS · **Node.js** · **PHP/Symfony** · **Python** · **Java**

DATABASES

PostgreSQL · **MySQL** · Oracle

DEVOPS & PRODUCTION

AWS · **Docker** · **GitHub** · **GitLab** · Bitbucket · Linux · Nginx / Apache

TOOLS & METHODS

Agile (Scrum / Kanban) · **Iterative V-cycle** · Jira · Notion · Confluence

AI ASSISTANCE & AUTOMATION

Claude Code · **GitHub Copilot** · **AI Agents** · **Skills** · AI-assisted documentation · Code analysis

PROFESSIONAL EXPERIENCE

BlueWhale

Apr 2025 — Apr 2026

Tech Lead Angular / Java

Angular **TypeScript strict** **Technical Leadership** **Code Review** **Legacy Modernization**

Blue Whale is France’s leading apple exporter. Founded in 1950 and based in Montauban, the group brings together close to 300 growers and over 100 employees. It sells around 300,000 tonnes of fruit per year — 17% of French apple production — for close to €300M in revenue. Its operations rely in particular on a central agricultural ERP.

I worked as Tech Lead on this ERP, used by 50 to 100 people, in a complex legacy context mixing **Angular**, **Java**, **Spring 2**, **PowerBuilder**, Oracle 9 and ageing infrastructure. My role covered team

support, direct contribution to structural technical topics and progressive modernisation of the application foundation, without service interruption.

- **Operational leadership** of a team of 3 fullstack developers: sprint organisation, topic clarification, code review and technical trade-offs.
- **Frontend modernisation:** **Angular** 15 → 21 migration, **DevExtreme** update and preparation of a migration to **Angular Material**, with guardrails and conventions to make both coexist progressively.
- **Progressive code quality improvement:** **TypeScript strict**, strict **ESLint**, Prettier and development conventions.
- **Nx standardisation** to ease migrations, homogenise practices and prepare future modular **Angular/NestJS** applications.
- Product collaboration: prioritisation, topic refinement, scope planning and delivery security.
- **Incremental legacy modernisation:** resolving code/**CI/CD** blockers, progressive debt reduction and foundation evolution without service interruption.

Technical roadmap, Engineering practices, Developer experience, Change management, Release management, Stakeholder management, Application lifecycle, Modular architecture, Software maintainability, Technical governance, Team support, Operational excellence.

Joorney

Jan 2023 — Aug 2024

Engineering Manager hands-on

Engineering Management Technical Leadership Software Architecture Delivery Management

Full-Stack Development

Founded in 2013, Joorney is an international company specialising in business plan production, notably for immigration cases (EB-5, E-2, L-1 visas). Present in the United States and France, it produces around 300 business plans a month — more than 2,500 to date — across more than 120 industries. Its business relied on high-volume document production and on internal processes requiring strong coordination between product, data and engineering.

As a hands-on Software Engineering Manager, I structured an international team, designed the architecture of an ecosystem used by around a hundred staff and industrialised previously highly

manual business processes. The stack combined **Angular**, **NestJS**, **Nx**, **PHP**, **Node.js**, **Python** and **AWS**.

Team & management

- Strengthened, structured and managed an international team of 7 developers, split into 2 squads: fullstack and **Python**/Data.
- Hiring, onboarding, agile rituals, operational follow-up, one-on-ones and team support.

Architecture & industrialisation

- Designed an ecosystem of 6 applications: **Angular** applications, a Microsoft Word plugin, a legacy **PHP** backend, **NestJS** services, **Node.js** scripts and **Python** AI modules for proofreading, correction and document inconsistency detection.
- Shipped a first financial application then progressively industrialised business plan writing tools, replacing manual workflows and legacy tools with dedicated business applications.
- Set up integrations with Microsoft, Google, HubSpot, Wrike and internal tools to synchronise data and secure processes.

Modernisation & delivery

- Hands-on technical ownership: POC, architecture decisions, API integrations, **Symfony/PHP** to **Nx/NestJS** migration and evolution security.
- Standardisation of development practices: **Nx**, schematics, **TypeScript strict**, **ESLint** and code conventions to homogenise practices, ease onboarding and secure evolutions.
- Managed **CI/CD**, deployments, **Bitbucket** to **GitHub** migration and Product / Data / Tech trade-offs with the CPO and Data team.

Team management, Team organisation, Distributed teams, Remote management, Engineering strategy, Technical governance, Application portfolio management, Platform modernisation, Process optimisation, Change management, Cross-functional leadership, Engineering operations, Software delivery lifecycle, Vendor coordination, Knowledge management, Organisation structuring.

Kaliz

Angular Lead Dev

Apr 2021 — Jun 2023

Angular

Technical Leadership

Code Review

Technical Debt Reduction

CI/CD

Kaliz is a Toulouse-based proptech specialising in rental management, founded in late 2019. With around fifty employees in Toulouse, Paris and Nantes, it has raised over €22M and manages several thousand units across around a hundred cities, with a target of 50,000 units by 2027. Its daily operations relied heavily on a central business application.

As **Angular** Lead Dev, I held technical responsibility for the frontend of this critical application, used by around thirty staff and several hundred external users. I remained heavily involved in development, refactoring and structural topics.

Hands-on development

- Development on structural frontend topics: refactoring, complex components, business evolutions, library updates and continuous improvement of the **Angular** foundation.
- Took ownership of a complex **Angular** frontend with debt impacting code readability, evolution quality and delivery capacity.

Technical leadership & quality

- Support for 4 to 5 frontend developers: code review, coaching, **Angular/RxJS** best practices, technical trade-offs and upskilling.
- Frontend roadmap and quality: debt prioritisation, application architecture decisions, **TypeScript strict**, strict **ESLint**, development conventions and structured code reviews.

Architecture & delivery

- Introduction of **Nx**, schematics and **NgRx** to standardise recurring components, speed up refactoring, clarify state management and reduce unnecessary backend calls.
- Secured frontend delivery: requirement clarification with product, frontend/backend contracts with **Swagger**, **GitLab CI/CD** and **Cypress / Playwright** end-to-end test foundation.

Frontend scaling, Developer experience, Engineering standards, Technical governance, Release management, Cross-functional collaboration, Software maintainability, Frontend performance, Team support, Incremental modernisation, Technical coaching.

Joorney

Fullstack PHP/Symfony consultant

Aug 2020

PHP Symfony Full-Stack Development Code Audit

Joorney is an international company specialising in business plan writing for immigration cases, present in the United States and France. At the time, the company was evolving its first internal business applications.

During a short engagement, I worked as a fullstack **PHP/Symfony** consultant, with the goal of quickly taking ownership of an existing application and delivering operational improvements to the code.

- **PHP/Symfony** development on a business plan generation application.
- Audit of existing code and identification of technical improvement areas.
- Bug fixes, behavioural improvements and delivery of functional evolutions.
- Contribution to application maintainability in a short, operational engagement context.

Technical assessment, Application stabilisation, Legacy codebase, Short engagement, Operational delivery, Web application maintenance, Technical problem solving, Software diagnosis, Existing code takeover, Targeted intervention.

964 / 2,000 characters

Scopea

Oct 2017 — Apr 2021

Fullstack Odoo consultant

Odoo **Python** **Full-Stack Development**

Scopea is a Toulouse-based cooperative and an **Odoo** Gold partner, specialising in the integration and custom development of this ERP for very small businesses and SMEs. Its engagements regularly required adapting the **Odoo** standard to each client's specific business processes.

Engaged as a fullstack consultant, I handled custom developments in **Python** and **Odoo**, from requirement analysis to production. I worked on a fixed-price basis on application improvements, business evolutions and complete modules.

- Quick onboarding on the **Odoo** ecosystem and **Python**/HTML/CSS development.
- Development of custom business modules to adapt **Odoo** to client processes not covered by the standard product.
- Participation in requirement gathering, technical solution definition, effort estimation and quote preparation.
- Bug fixes, functional evolutions and full module development per client requests.

- QA, delivery, follow-up and maintenance of deliverables, working alone or in a pair, in a fixed-price, outcome-oriented context.

ERP customisation, Business process mapping, Client consulting, End-to-end ownership, Solution delivery, Functional-technical interface, Client-facing development, Project ownership, Production support, Stakeholder communication, Custom business software, Delivery ownership, Business process automation.

LivingObjects

Sept 2019 — Mar 2020

Angular expert consultant

Angular Code Review TypeScript strict Technical mentoring

LivingObjects is a Toulouse-based software vendor specialising in network analytics and monitoring for telecom operators, with a platform able to monitor millions of devices at Tier 1 operators. After divesting part of its activities to US-based LiveAction in 2017, the company continued developing several monitoring products.

I worked there as an **Angular** consultant on an application integrated into a legacy foundation. The engagement combined frontend development, integration of new modules, code audit and technical support for the team.

- Development and maintenance of **Angular** modules within an existing application.
- Integration of new **Angular** modules into a legacy foundation, with attention to consistency with existing code and maintainability.
- Code audit, code review and improvement proposals on frontend topics.
- Technical mentoring of the team on **Angular** best practices, **TypeScript strict**, **ESLint** and development conventions.
- Built dashboards with Highcharts, integrating charts, tables, advanced parameters and aggregated data output.

Frontend consulting, Technical assessment, Codebase modernisation, Developer support, Knowledge transfer, Engineering standards, Component design, Frontend governance, Technical consulting, Development quality, Engineering support.

LiveAction

Oct 2017 — Mar 2019

Senior developer and Angular frontend lead

Angular TypeScript strict RxJS Data Visualization PDF Generation

LiveAction is a US software vendor (Palo Alto), founded in 2007 and specialising in network performance monitoring and analytics, used by more than 750 enterprises. Its Toulouse entity stems from the 2017 acquisition of LivingObjects' monitoring business, in a context of product modernisation.

In this context, I worked as a senior developer and frontend lead on the structural migration of the application from **AngularJS** to **Angular**. The engagement also covered rebuilding the frontend foundation, improving its maintainability and modernising development practices.

- **Major contribution to the AngularJS → Angular migration**, carried out on a substantial application with many modules, pages and components.
- Introduction of **TypeScript strict**, **ESLint** and **Angular/RxJS** best practices to strengthen reliability, readability and maintainability.
- Development and maintenance of customisable dashboards with **Highcharts** and **D3.js**, on data-rich interfaces with performance constraints.
- Contribution to customisable PDF report modules, with accurate rendering constraints between web usage and export.
- Frontend lead role within the team: code reviews, best practice sharing and support on the **Angular** foundation.
- Occasional **Java** development to reinforce the backend team on cross-cutting topics.

Frontend modernisation, Migration strategy, Legacy transition, Technical ownership, Engineering standards, Performance optimisation, Knowledge sharing, Cross-team collaboration, Incremental rewrite, User interface architecture, Migration planning, Frontend governance.

LivingObjects

Oct 2015 — Oct 2017

AngularJS frontend developer

LivingObjects is a Toulouse-based software vendor specialising in network analytics and monitoring for telecom operators, with a platform able to monitor millions of devices at Tier 1 operators. The engagement, carried out through Ausy — an international high-tech consulting and engineering group — involved a data-rich platform used in complex telecom environments.

I joined the team as an **AngularJS** frontend developer to design and maintain interfaces under strong constraints around visualisation, performance and output as customisable dashboards and reports.

- Development and maintenance of an **AngularJS** application used by several hundred users.
- Built customisable dashboards integrating Highcharts charts, tables and advanced configuration forms.
- Built the schedulable PDF report design module, with accurate rendering constraints between web usage and export.
- Rapid onboarding on **AngularJS**, frontend best practices and maintainable development principles in a demanding environment.

Data-rich interfaces, Interactive reports, Scheduled reports, Interface performance, Client-side architecture, Rich web application, Data presentation, Information visualisation, User interface engineering, Reporting platform, Configurable dashboards.

Canal+

Jan 2012 — Sept 2015

Fullstack developer then technical lead

PHP MySQL High Availability Technical Coordination Release Management

The Canal+ Group is a major international audiovisual player, present in more than 70 countries. It now counts around 40 million subscribers, for revenue of €6.26bn in 2025. The engagement was carried out through Omnilog, a digital services and engineering company that counts Canal+ among its clients. It concerned the interfaces accessible from set-top boxes and various web platforms, in a critical, highly exposed production environment.

There I progressed from a fullstack developer role to that of technical lead. This experience allowed me to build a solid production culture around performance, resilience, multi-platform support, monitoring, cross-team coordination and high-stakes releases.

Development & production

- Development and maintenance of **PHP/Smarty**, JavaScript, HTML, CSS and MySQL applications, used across many platforms: set-top boxes, web, smartphone and tablet.
- Operating in a high-volume environment, with peaks reaching several hundred thousand simultaneous users and several million during major events.
- Contribution to interfaces with strict performance, availability, accessibility, multi-language and multi-hardware compatibility constraints.

Coordination & delivery

- Product / QA / Infrastructure coordination: test tracking, bug prioritisation, release note authoring, monitoring, cross-team communication and release orchestration.
- Supervised high-stakes releases on a distributed architecture of approximately 24 servers, with progressive deployments, testing phases, monitoring follow-up, rollbacks and hotfixes when needed.

Technical projects & lead

- Led the migration from 32-bit to 64-bit servers: technical scoping, POC, application adaptations, test coordination, cross-team follow-up and production rollout.
- SVN to Git migration, discovery and integration of set-top box / internet box API, support of validation environments and mentoring of new joiners on the legacy application and release processes.

Production readiness, Operational excellence, Reliability engineering, Release governance, High-traffic systems, Incident management, Cross-functional leadership, Platform migration, Service continuity, Production operations, Capacity planning, Deployment strategy, Risk management.

INRIA

SOA / IoT research intern

May 2011 — Oct 2011

Research SOA BPEL

Inria is the French national research institute dedicated to digital science and technology. Within the ADAM team, work focused notably on service-oriented architectures, distributed systems and the Internet of Things.

I devoted this 6-month research internship to the topic *Bridging Software-Oriented Architecture with the Internet of Things*. The project consisted in modelling CBRN crisis procedures using a SOA/SCA approach and orchestrating interactions between actors with BPEL.

- Work split between research, modelling and technical prototyping in several languages.
- Wrote a detailed internship report: state of the art, architecture, crisis processes and experimentation findings.

Distributed systems, Workflow orchestration, Service composition, Research engineering, Process modelling, Academic research, Experimental software, Crisis information systems, Component-based systems, Research methodology, Scientific writing.

EADS Cassidian

Jun 2010 — Oct 2010

Java/J2EE engineering intern

Java J2EE Technical Documentation

EADS, now Airbus, was one of the world's leading aerospace, space and defence groups. Cassidian, its defence and security division, used numerous internal tools to structure and share its technical documentation.

During this engineering internship, I contributed to the design and development of a **Java**/J2EE web documentation platform, as well as to formalising its architecture and data model.

- Application development in **Java**/J2EE, HTML, CSS and jQuery.
- Production of the internship report, architecture diagrams, database diagrams and technical documentation.

Document management, Web platform, System design, Technical specifications, Data modelling, Application design, Internal tools, Information architecture, Enterprise application development.

Junior enterprise EISTI

2008

Web developer

PHP Web Development HTML/CSS

The EISTI Junior Enterprise — now CY Tech — let students carry out assignments for real client companies, in a professional, delivery-oriented setting.

There I delivered my first web projects in **PHP**, HTML, CSS, vanilla JavaScript and jQuery, from understanding the requirement through to delivering the sites to clients.

- Developed a website for a travel agency and a showcase site for a glazing company.
- First client experience: web integration, adapting to requirements and delivering simple sites.

Project ownership, Client communication, Service delivery, Websites for small businesses, Commercial context, Client relationship, Web project delivery, First professional experience.

696 / 2,000 characters

EDUCATION

- **2011** - Engineering degree in Mathematics and Computer Science, EISTI, Pau.
- **2009** - Bachelor's degree in Mathematics and Computer Science, University of Cergy-Pontoise, in partnership with EISTI.
- **2006** - Scientific Baccalaureate, engineering sciences option, mathematics specialisation, Lycée International de Colomiers.

PERSONAL PROJECTS & EXPERIMENTS

- Built a homelab with Proxmox, Terraform and Ansible.
- Volunteer frontend developer ([Vue.js](#)) for a slow-motion film editing application.
- Built a wedding website using React, [Firebase](#), Docker, [AWS](#) and [Node.js](#) scripts.

ADDITIONAL INFORMATION

- Professional English, TOEIC 780, experience in international teams.
