

Tech Lead / Engineering Manager hands-on

Tech Lead / Engineering Manager hands-on. 15+ years of experience and expertise in **Angular**, strict **TypeScript** and **NestJS**.

I have built and grown development teams. I have modernised critical legacy platforms without disrupting delivery.

Sectors: media, real estate, agriculture, banking, telecoms, software products.

Selected companies: Canal+, Crédit Agricole, Joorney, Kaliz and BlueWhale.

I help teams with:

- Architecture and technical choices
- Progressive modernisation of legacy applications
- Quality and delivery improvement (testing, **CI/CD**)
- Product / engineering collaboration
- Mentoring and upskilling

My approach: technical leadership and hands-on contribution to architecture and code. Pragmatic agile methods, adapted to the product, the team and the context.

I use AI (**Claude Code**, **GitHub Copilot**) as an engineering assistant. I keep ownership of technical decisions.

I enjoy demanding environments, committed to quality, delivery and continuous improvement.

Recently: a legacy ERP modernised, ~50% faster display, reduced frontend debt. And a set of Copilot skills adopted by ~80% of a development team.

PROFESSIONAL EXPERIENCE

Crédit Agricole Nord Midi-Pyrénées

Jul 2026 — Today

Agentic Fullstack Developer

Agentic Development · Angular · .NET 8 · Code Review · Component Library

Regional bank of the Crédit Agricole group, rebuilding its legacy .NET/ASP application estate.

Three-month engagement in a team of a dozen developers, in a tightly secured banking environment.

My responsibilities:

- Rewrote **2 business applications from scratch** in **.NET 8**, **Angular 16**, strict **TypeScript** and **SQL Server**.
- Designed **GitHub Copilot skills: Angular** and .NET development, strict code review, codebase audit.

- Promoted **Angular, TypeScript and RxJS best practices**, and demoed the skills to kick-start adoption.
- Review the team's **pull requests**.
- Revived the **shared Angular component library** and **migrated its components to Angular 21**.

Results:

- **AI usage extended to around 80% of the team** through the skills, for both development and code review.
- **Far fewer review comments and faster reviews** on pull requests run through the assisted review.
- **Risk and cost of the Angular 21 upgrade reduced** by a migration plan that can be rerun.

Environment : Angular, TypeScript, RxJS, .NET 8, C#, GitHub Copilot Enterprise, Git (GitLab), ESLint, Prettier, Confluence, SQL Server

BlueWhale

Apr 2025 — Apr 2026

Tech Lead

Angular TypeScript strict Technical Leadership Code Review Legacy Modernization

Blue Whale is France's leading apple exporter (founded in 1950, close to 300 growers, ~€300M revenue).

Its operations rely on a central agricultural ERP, used by around fifty staff.

Tech Lead on this ERP, in a complex legacy context. Stack: **Angular, Java/Spring 2, 23 PowerBuilder** applications, Oracle 9, ageing infrastructure.

My responsibilities:

Leadership & team

- **Led** a team of 3 senior fullstack developers, ran sprints and technical trade-offs.
- Structured code reviews, coached best practices and **owned technical decisions**.
- Collaborated with product on estimates, prioritisation and release scoping.

Modernisation & architecture

- Modernised the frontend: migrated **Angular**, updated **DevExtreme** and prepared a progressive transition to **Angular Material**.
- Introduced **NgRx** to make complex application flows more reliable.

Quality & delivery

- **Strengthened quality:** **TypeScript strict**, strict **ESLint**, Prettier, Stylelint and shared conventions.
- **Standardised with Nx** (schematics) to align practices and prepare future **Angular/NestJS** applications.
- **Incrementally modernised** the legacy without service interruption: resolved code/CI-CD blockers and reduced debt.

Results:

- **Perceived display speed up by around 50%**, better user and developer experience.
- **Risk and future cost of changes reduced** by the **Angular** 15 → 21 migration and the standardisation work.
- **Delivery continuity maintained** throughout the technical work.
- **Dependency on the legacy codebase and on individual knowledge reduced**, thanks to more consistent code.

*Environment : **Angular**, **Angular Material**, **DevExtreme**, **TypeScript**, **RxJS**, **NgRx**, **NX**, **Java**, **PowerBuilder**, **Node.js** scripts, **Git** (**Bitbucket**), **Docker**, **ESLint**, **Prettier**, **Stylelint**, **GNU/Linux**, **Windows Server 2003**, **Oracle 9**, **PostgreSQL**, **Tomcat***

Joorney

Jan 2023 — Aug 2024

Engineering Manager hands-on

Engineering Management Technical Leadership Software Architecture Delivery Management

Full-Stack Development

Joorney: a US company producing business plans for immigration cases (EB-5, E-2, L-1 visas), ~300 deliverables a month, 120+ industries.

Engineering Manager hands-on owning the full application scope (~100 staff). Stack: **Angular**, **NestJS**, **Nx**, **PHP**, **Node.js**, **Python**, **AWS**.

My responsibilities:

Team & management

- **Structured an international team of 3 to 7 developers** (5 hires, 2 squads: fullstack and **Python**/Data).
- Hiring, onboarding, one-on-ones and annual reviews, **handling departures** and cross-cultural async management.

Architecture & industrialisation

- **Designed the architecture** of an ecosystem grown from 1 to 6 business applications.
- Shipped the financial application, then industrialised the writing tools.
- Integrated **Python AI modules** (proofreading, correction, inconsistency detection) and sync tools for Microsoft, Google, HubSpot, Wrike.

Modernisation & delivery

- **Owned technical decisions hands-on**: POC, architecture choices, API integrations, migration **Symfony/PHP** → **Nx/NestJS** (legacy engine kept).
- Standardised practices (**Nx**, schematics, **TypeScript strict**, **ESLint**); owned **CI/CD** and the **Bitbucket** → **GitHub** migration; introduced **GitHub Copilot**.
- Drove **Product / Data / Tech** trade-offs with the CPO; settled the company-wide collaboration-suite choice.

Results:

- **Production capacity increased** through the progressive industrialisation of previously manual or scattered workflows.
- **Dependency on legacy tools and individual knowledge reduced**, the ecosystem now mature across the whole team.
- **Data quality and reliability improved**, fewer production errors.
- **The company's ability to launch and maintain new services strengthened** by a shared **NestJS/TypeScript** foundation.
- **Staff turnover reduced**, thanks to more reliable internal tools.

*Environment : **Angular**, **NestJS**, **NodeJS**, **TypeScript strict**, **RxJS**, **NgRx**, **Nx**, **PHP**, **Symfony**, **Python**, **Git** (**Bitbucket** / **GitHub**), **Jira**, **Notion**, **Docker**, **AWS**, **GitHub Copilot**, **GNU/Linux***

Kaliz

Apr 2021 — Jun 2023

Tech Lead Angular

Angular Technical Leadership Code Review Technical Debt Reduction CI/CD

Kaliz is a rental-management proptech. Founded late 2019, over €22M raised, several tens of thousands of units managed. Operations run on a central business application.

Tech Lead Angular on this critical application (CRM, leases, billing), for around thirty staff.

Foundation: **Nx** monorepo, ~80,000 lines of **TypeScript**, 650+ components.

My responsibilities:

Technical leadership & quality

- **Held technical frontend responsibility** for 4 to 5 developers.
- Structured code reviews, coaching, **Angular/RxJS** best practices and trade-offs.
- Defined the **frontend roadmap**: debt prioritisation and architecture decisions.
- Ran agile rituals (Scrum Master) and worked with product.

Hands-on development

- **Audited the code and progressively improved** the foundation, without service interruption.
- Refactoring, complex components and structural business-driven updates.
- Rolled out **TypeScript strict**, strict **ESLint**, Prettier and development conventions.

Architecture & delivery

- Introduced **NgRx**: single source of truth, clarity on complex business logic, fewer backend calls.
- **Standardised with Nx and schematics**: more reliable recurring components and version upgrades.
- Secured delivery: **Swagger** API contracts and **GitLab CI/CD**.
- End-to-end tests with **Cypress / Playwright** on key flows.

Results:

- **Ability to evolve the critical application preserved and fix turnaround time reduced**, thanks to progressively reduced frontend debt.
- **Regression risk reduced** on sensitive business flows, through automated end-to-end tests.
- **Business needs better scoped before development**, through closer collaboration with product.
- **Team made more autonomous** on **Angular, RxJS**, code review and day-to-day technical trade-offs.

*Environment : **Angular, TypeScript strict, RxJS, NgRx, Nx**, HTML, CSS, Git (Gitlab), Docker, Notion, **Cypress / Playwright**, Prettier, GNU/Linux*

Florian Lefevre Consulting

Full-stack Engineer

Sept 2019 — Apr 2021

Full-Stack Development

Angular

Code Audit

Autonomy

Rapid Onboarding

Full-stack Engineer, freelance across three complementary engagements, with a role blending hands-on development, code audits, technical support and delivery ownership. Work on existing applications, with strong autonomy and fast ramp-up on varied stacks.

LivingObjects - Senior Angular Developer — *telecom network monitoring*

LivingObjects builds network monitoring platforms for Tier 1 telecom operators, covering millions of devices.

- Integrated new modules into a legacy **PHP** foundation, in **TypeScript strict**.
- Code audit and review, built **Highcharts** dashboards and progressively improved frontend maintainability.
- Mentored the team on **Angular**, **TypeScript** and **ESLint** best practices.

Result: frontend practices made more consistent, onboarding eased and team made more autonomous on **Angular** and **TypeScript strict**.

Joorney - Fullstack PHP/Symfony Developer — *short engagement*

Joorney produces business plans for US immigration cases.

- Short engagement on an existing business application in **PHP/Symfony**.
- Fast ramp-up on the codebase, technical audit and handling of priority topics.
- Delivered targeted fixes and identified maintainability improvement areas.

Result: technical risks identified and priority improvements delivered within a short timeframe.

Scopea - Fullstack Odoo Engineer — *recurring fixed-price engagement*

Scopea is an **Odoo** Gold partner serving very small businesses and SMEs on custom development.

- Gathered requirements, designed the solution and estimated effort.
- Developed custom business modules in **Python** and **Odoo**.
- QA, production delivery and follow-up, working alone or in a pair.
- Recurring fixed-price engagements, with direct ownership of the assigned scope.

Result: business modules delivered end to end, tailored to client processes, with rapid ramp-up on the **Odoo/Python** ecosystem.

*Environment : **Angular**, **PHP**, **Symfony**, **Odoo**, **Python**, **TypeScript strict**, **HTML**, **CSS**, **Git**, **GitHub**, **Redmine**, **Jira**, **Docker**, **GNU/Linux***

1,835 / 2,000 characters

Senior Angular developer

Angular TypeScript strict RxJS Data Visualization PDF Generation

LiveAction is a US software vendor (Palo Alto), founded in 2007, specialising in network performance analytics. Its product is used by more than 750 enterprises. Its Toulouse entity stems from the 2017 acquisition of LivingObjects' monitoring business.

Senior Angular developer on the structural migration of the application from **AngularJS** to **Angular**. Mission centred on rebuilding the frontend foundation, improving its maintainability and modernising practices.

- Made a **major contribution to the AngularJS → Angular 2 migration**: ~15 modules, ~50 pages and hundreds of components.
- Rolled out **TypeScript strict**, **ESLint** and **Angular/RxJS** best practices, with code reviews and team support.
- Built customisable dashboards with **Highcharts** and **D3.js** on data-rich interfaces; contributed to customisable PDF report modules.

Results:

- **Faster loading and reduced technical debt**, on an application rewritten on solid foundations.
- **Fewer bugs and better maintainability**, thanks to **TypeScript strict** in place from day one.
- **Lower future maintenance cost and hiring friction**, thanks to a modern, more standardised **Angular** foundation.
- **Faster fixes and easier onboarding** on the migrated areas, thanks to a more consistent architecture.
- **Product longevity strengthened**, without committing to a risky full rewrite.

*Environment : **Angular**, **AngularJS**, **TypeScript strict**, **HTML**, **CSS**, **Java**, **Git (Gitlab)**, **Trello**, **Jira**, **Docker**, **GNU/Linux**, **Nginx***

1,311 / 2,000 characters

LivingObjects

Oct 2015 — Oct 2017

AngularJS developer

AngularJS Data Visualization Highcharts

Engagement carried out through Ausy, an international consulting and engineering group, at LivingObjects — a Toulouse-based software vendor specialising in network analytics and monitoring for telecom operators. Its platform monitors millions of devices at Tier 1 operators.

AngularJS developer on interfaces with strong visualisation and performance constraints: dashboards and customisable reports.

My responsibilities:

- Developed and maintained an **AngularJS** application used by several hundred users.
- Built customisable dashboards, integrating Highcharts charts, tables and advanced configuration forms.
- **Owned** the schedulable PDF report design module, with consistent rendering across web display and export.
- Ramped up rapidly on **AngularJS**, frontend best practices and maintainable development principles in a demanding environment.

Results:

- Complex data made more accessible through customisable Highcharts dashboards.
- Recurring report production automated with a schedulable PDF design and generation module.
- Product reporting capability extended to more varied, configurable outputs.

*Environment : **AngularJS**, **TypeScript**, HTML, CSS, Trello, Git (Gitlab), Redmine, Jira, GNU/Linux, Nginx*

Canal+

Jan 2012 — Sept 2015

Fullstack developer then technical lead

PHP MySQL High Availability Technical Coordination Release Management

The Canal+ Group is a major international audiovisual player (70+ countries, around 40 million subscribers). Engagement carried out through Omnilog, on set-top box and web interfaces.

Fullstack developer then technical lead on consumer-facing interfaces, in a critical, highly exposed production environment.

- Developed and maintained **PHP/Smarty**, JavaScript and MySQL interfaces across set-top boxes, ISP boxes, web and mobile.
- Operated at high volume under strict availability constraints: hundreds of thousands of simultaneous users, up to several million during major events.
- Built an **accessible, multi-language interface** adapted for deaf, hard-of-hearing and visually impaired users.
- Coordinated **Product / QA / Infrastructure**: testing, fixes, release notes and release orchestration.

- Supervised high-stakes releases across **~24 servers**: progressive deployments, monitoring, rollbacks and hotfixes.
- Led the **32 → 64-bit** server migration and the **SVN → Git** migration.

Results:

- **Service continuity preserved** on very high-traffic interfaces, through progressive deployments, monitoring and rollback procedures.
- **Commercial and reputational risk of releases reduced**, through close coordination between Product, QA and Infrastructure.
- **Infrastructure longevity strengthened** by the 32-bit to 64-bit server migration, carried out without major disruption.
- **New developers ramped up faster** on the application and its release processes.

*Environment : **PHP**, **Smarty**, HTML, CSS, JavaScript, MySQL, NoSQL, **AngularJS**, SVN, Git, Redmine, Trello, Jenkins, Jira, Confluence, Windows, GNU/Linux, Apache, Httpd, Nginx, Akamai, Amazon (**AWS**)*

INRIA

May 2011 — Oct 2011

SOA / IoT research intern

Research SOA BPEL

Inria is the French national research institute for digital science and technology. Within the ADAM team: service-oriented architectures, distributed systems and the Internet of Things.

6-month research internship on *Bridging Software-Oriented Architecture with the Internet of Things*. Modelled CBRN crisis procedures with a SOA/SCA approach, orchestrated interactions via BPEL.

- Carried out research, modelling and technical prototyping in several languages.
- Wrote a detailed internship report: state of the art, architecture, crisis processes and experimentation findings.

579 / 2,000 characters

EADS Cassidian

Jun 2010 — Oct 2010

Java/J2EE engineering intern

Java J2EE Technical Documentation

EADS, now Airbus, was one of the world's leading aerospace, space and defence groups. Cassidian, its defence division, used many internal tools for technical documentation.

Engineering internship: designed and developed a **Java**/J2EE web documentation platform. Formalised its architecture and data model.

- Developed the application in **Java**/J2EE, HTML, CSS and jQuery.
- Produced the internship report, architecture diagrams, database diagrams and technical documentation.

473 / 2,000 characters

Junior enterprise EISTI

2008

Web developer

PHP **Web Development** **HTML/CSS**

The EISTI Junior Enterprise (now CY Tech) gave students assignments for real client companies. Professional, delivery-oriented setting.

Delivered **first web projects** in **PHP**, HTML, CSS, JavaScript and jQuery, from requirements to client delivery.

- Built a website for a travel agency and a showcase site for a glazing company.
- Integrated web pages, adapted to requirements and delivered simple sites, in direct client contact.

429 / 2,000 characters

EDUCATION

- **2011** - Engineering degree in Mathematics and Computer Science, EISTI, Pau.
- **2009** - Bachelor's degree in Mathematics and Computer Science, University of Cergy-Pontoise, in partnership with EISTI.
- **2006** - Scientific Baccalaureate, engineering sciences option, mathematics specialisation, Lycée International de Colomiers.

PERSONAL PROJECTS & EXPERIMENTS

- Built a homelab with Proxmox, Terraform and Ansible.
- Volunteer frontend developer ([Vue.js](#)) for a slow-motion film editing application.
- Built a wedding website using React, [Firebase](#), Docker, [AWS](#) and [Node.js](#) scripts.

ADDITIONAL INFORMATION

- Professional English, TOEIC 780, experience in international teams.
