

Florian Lefevre

Tech Lead / Engineering Manager hands-on

Angular · TypeScript strict · NestJS · Architecture applicative ·
Qualité & delivery

Tech Lead, with hands-on **Engineering Manager** experience,
specialised in the **design, development** and **evolution of
business web applications**, with deep expertise in **Angular**,
strict **TypeScript** and **NestJS**.

I help teams with **application architecture, code quality**,
reviews, **delivery** and **upskilling**, while maintaining hands-
on involvement in technical decisions.

I integrate AI assistance — including **Claude Code, GitHub
Copilot**, agents and skills — as a lever for analysis,
development, documentation and continuous improvement,
while retaining **full ownership of engineering decisions**.

Toulouse area

OPERATIONAL SUMMARY

- Design and delivery of business web applications, with strong **Angular / TypeScript strict** expertise.
- Application architecture, codebase structuring and pragmatic technical decisions.
- Hands-on technical leadership: code review, quality, **CI/CD**, team support.
- Product / Data / Tech collaboration to frame requirements, prioritise and secure delivery.
- Agentic development: designed development, review and audit skills adopted across the team.

AREAS OF EXPERTISE

Business application design

Design and delivery of business web applications, from scoping to production.

Application architecture

Design of modular foundations, structural decisions, modern/legacy coexistence.

Quality & industrialisation

TypeScript strict, ESLint, code review, CI/CD pipelines and delivery reliability.

Technical leadership

Team coaching, structured code reviews, technical trade-offs.

Delivery & product collaboration

Scope planning, prioritisation and risk management with product and stakeholders.

Hands-on management

Managing 3 to 7 developers, hiring, agile rituals and upskilling.

KEY SKILLS

TECHNICAL LEADERSHIP & ARCHITECTURE

Technical Leadership ·

Application Architecture ·

Technical Roadmap · Legacy Modernization

· Coaching · Technical decisions ·

Trade-offs

MANAGEMENT & DELIVERY

Engineering Management ·

Delivery Management ·

Product Collaboration · Team Leadership ·

Recruiting · Onboarding ·

Stakeholder Management

QUALITY & INDUSTRIALISATION

Code Review · CI/CD · ESLint ·

Cypress / Playwright · Swagger / OpenAPI

· Prettier

FRONTEND

Angular · TypeScript strict · RxJS ·

NgRx · Nx · HTML / CSS

BACKEND & FULLSTACK

NestJS · Node.js · PHP/Symfony ·

Python · Java · .NET 8 / C#

DATABASES

PostgreSQL · MySQL · Oracle

DEVOPS & PRODUCTION

AWS · Docker · GitHub · GitLab ·

Bitbucket · Linux · Nginx / Apache

TOOLS & METHODS

Agile (Scrum / Kanban) · Iterative V-cycle

· Jira · Notion · Confluence

AI ASSISTANCE & AUTOMATION

Claude Code · GitHub Copilot · AI Agents

· Skills · Copilot Skills ·

AI-assisted documentation · Code analysis

Crédit Agricole Nord Midi-Pyrénées (Florian Lefevre Consulting) Jul 2026 — Today Agentic Fullstack Developer Montauban

Crédit Agricole Nord Midi-Pyrénées is a regional bank of the Crédit Agricole group, whose legacy applications mainly run on .NET and ASP.

Summary: three-month engagement as an **Agentic Fullstack Developer**, in a team of a dozen developers. It is part of a programme rebuilding the legacy application estate, from Excel macros to applications spanning dozens of pages.

Main contribution: rewrote two business applications and spread agentic development across the team with no formal lead role, in a tightly constrained banking context: no software installation, restricted AI models.

Key skills: Agentic development · **Angular** · Strict **TypeScript** · **RxJS** · .NET 8 · Code review

*Environment: **Angular 16**, **TypeScript**, **RxJS**, .NET 8, C#, SQL Server, **GitHub Copilot Enterprise**, **GitLab**, **Confluence***

Application development

Key skills: **Agentic Development** · **Angular** · .NET 8 · **Code Review** · **Component Library** · **GitHub Copilot** · **TypeScript strict** · **RxJS** · **SQL Server** · **ESLint** · **Unit Testing** · **Angular Migration**

*Environment : **Angular**, **TypeScript**, **RxJS**, .NET 8, C#, **GitHub Copilot Enterprise**, **Git (GitLab)**, **ESLint**, **Prettier**, **Confluence**, **SQL Server***

- Rewrote **two business applications from scratch** in .NET 8, **Angular 16**, **strict TypeScript** and SQL Server, with unit tests.
- Delivered cash discrepancy and communication campaign tools, with role-based access for around twenty users.
- Became productive on .NET in about ten days, with AI assistance.

Agentic development and team practices

- Designed **GitHub Copilot skills: Angular** and .NET development following team conventions, **strict code review** before pull requests, **codebase audit**.
- Built skills integrating with **Confluence**, **GitLab** and the Kanban tool, shared through a common **GitLab repository**.
- Promoted **Angular**, **TypeScript** and **RxJS best practices**, then ran a live demo to kick-start adoption of the skills.

- Review the team's **pull requests**.
- Selected replacement models after the previously used ones were withdrawn, by testing them against existing skills.

Shared foundation and **Angular** migration

- Revived the **shared Angular component library**: documentation, APIs, showcase, unit tests, **ESLint** and Prettier.
- **Migrated components from Angular 16 to 21** and wrote a **migration plan that can be rerun**, recording difficulties, solutions and decisions.

Results

- **AI usage extended to around 80% of the team**, for both development and code review, through skills tailored to its conventions.
- **Far fewer review comments and faster reviews** on pull requests run through the assisted review: from around ten comments to a handful (reviewer's perception).
- **Risk and cost of the Angular 21 upgrade reduced**: components migrated, plan ready to rerun once the design direction is settled.

BlueWhale (Florian Lefevre Consulting)
Tech Lead

Apr 2025 — Apr 2026
Montauban

Blue Whale is France's leading apple exporter. Founded in 1950 and based in Montauban, the group brings together close to 300 growers and over 100 employees. It sells around 300,000 tonnes of fruit per year — 17% of French apple production — for close to €300M in revenue.

Tech Lead on a management and sales ERP for agricultural products, used by around fifty users, in a complex legacy environment mixing **Angular**, **Java/Spring 2**, **PowerBuilder**, Oracle 9, Tomcat and ageing Windows Server infrastructure.

The objective of the engagement was to progressively modernise the application foundation, strengthen development practices and secure delivery, while keeping the existing system in production.

Key skills:

Angular · **TypeScript strict** · **Technical Leadership** · **Code Review** · **Legacy Modernization** ·
Nx · NgRx · Java/Spring · NestJS · DevExtreme · Technical Debt Reduction · CI/CD · Code Quality

Impact: modernised a business legacy ERP without service interruption (display speed perceived as around 50% faster, after UX/UI optimisation and fewer redundant calls), with strengthened quality practices, secured delivery and hands-on support for the team.

Environment : Angular, Angular Material, DevExtreme, TypeScript, RxJS, NgRx, NX, Java, PowerBuilder, Node.js scripts, Git (Bitbucket), Docker, ESLint, Prettier, Stylelint, GNU/Linux, Windows Server 2003, Oracle 9, PostgreSQL, Tomcat

Leadership & delivery

- Led a team of 3 fullstack developers: sprint organisation, requirement clarification, code review, technical trade-offs and best practice dissemination.
- Collaborated with product to refine requirements, challenge solutions, assist with prioritisation, scope planning and safer delivery.
- Resolved technical blockers around code, **CI/CD** and release processes.

Frontend modernisation

- Progressively modernised the frontend: migrated **Angular 15** → **21**, updated **DevExtreme** and prepared a migration to **Angular Material**.
- Introduced guardrails and conventions to let **DevExtreme** and **Angular Material** progressively coexist.
- Introduced **NgRx** to structure state management, improve code readability and make complex application flows more reliable.

Quality & technical foundation

- Progressively strengthened code quality: **TypeScript strict**, strict **ESLint**, Prettier and development conventions.
- Standardised development with **Nx**: schematics, conventions and workspace structuring.
- Aimed to ease migrations, accelerate code generation and prepare future modular **Angular/NestJS** applications.
- Defined an **incremental modernisation approach** balancing legacy maintenance in production, integration of new technical components and progressive debt reduction.

Technical trade-offs

- **Nx** had opened a path to migrate the 23 **PowerBuilder** applications to **NestJS**; the path was judged too ambitious and dropped by management after several scope revisions.
- GraphQL was considered then dropped, due to insufficient team familiarity, in favour of a more standard REST API on **NestJS** that the whole team could pick up more easily.

Results:

- **Perceived display speed up by around 50%**, better user and developer experience thanks to the progressive platform modernisation.
- **Risk and future cost of changes reduced** by the **Angular** 15 → 21 migration and the standardisation work.
- **Delivery continuity maintained** throughout the technical work, without disrupting business needs.
- **Dependency on the legacy codebase and on individual knowledge reduced**, thanks to more consistent code.

Joorney (Florian Lefevre Consulting)

Jan 2023 — Aug 2024

Engineering Manager hands-on

Full remote

Founded in 2013, Joorney is an international company specialising in business plan production, notably for immigration cases (EB-5, E-2, L-1 visas). Present in the United States and France, it produces around 300 business plans a month, more than 2,500 to date, across more than 120 industries.

Engineering Manager hands-on on an internal application ecosystem dedicated to immigration business plan generation, used by around a hundred internal users, using a stack of **Angular**, **NestJS**, **Nx**, **PHP**, **Node.js**, **Python** and **AWS**.

Objective: move from a still-young application foundation and highly manual workflows to a structured, maintainable ecosystem capable of industrialising internal document production.

Key skills:

Engineering Management · Technical Leadership · Software Architecture · Delivery Management · Full-Stack Development

· Angular · NestJS · TypeScript strict ·

PHP/Symfony · Python · AWS · CI/CD · Technical Roadmap · Team Leadership · Product Collaboration · AI-Assisted Development

Impact: grew an international team from 3 to 7 developers and industrialised an ecosystem grown from 1 legacy application to 6 internal applications, enabling faster and more reliable business plan production.

Environment : Angular, NestJS, NodeJS, TypeScript strict, RxJS, NgRx, Nx, PHP, Symfony, Python, Git (Bitbucket / GitHub), Jira, Notion, Docker, AWS, GitHub Copilot, GNU/Linux

Team & management

- Strengthened, structured and grew an **international team from 3 to 7 developers**, split into 2 squads: fullstack **Angular/NestJS/PHP** and **Python/Data**.
- Owned hiring, onboarding, agile rituals, one-on-ones, annual and departure reviews, day-to-day follow-up and priority management.
- Set up team ways of working adapted to an international context: async communication, cultural differences, time zones and progressive upskilling.
- Coached the team on code review practices, knowledge sharing and technical ownership.

Architecture & industrialisation

- **Designed the software, application and technical architecture** of an **ecosystem of 6 applications**.
- Stack: **Angular** applications, Microsoft Word plugin, legacy **PHP** backend, **NestJS** services, **Node.js** scripts and **Python** AI modules.
- Shipped and evolved a first financial application, then progressively industrialised business plan writing tools.
- Progressively replaced manual workflows and legacy tools with dedicated business applications, to secure processes and reduce errors.
- Developed a **Microsoft Word plugin in Angular**, letting teams pull financial data directly into the documents they authored.
- Set up **NestJS** services and **Node.js** scripts to synchronise data between Microsoft, Google, HubSpot, Wrike and internal tools.
- Integrated **AI modules in Python** to assist with proofreading, correction and inconsistency detection in Word documents.

Modernisation & hands-on technical

- **Owned technical decisions hands-on:** POC, architecture choices, API integrations, technology trade-offs and de-risking future changes.

- Led a progressive **Symfony/PHP** → **Nx/NestJS** migration, maintaining the useful legacy engine while introducing new **TypeScript** components the team knew better.
- Made the pragmatic call to retain the functional legacy core while migrating management, storage, formatting and integration responsibilities to components the team knew better.
- Introduced development standards: **Nx**, schematics, **TypeScript strict**, **ESLint** and code conventions.
- Aimed to align practices, ease onboarding and reduce risk in future changes.
- Owned **CI/CD**, deployments, the **Bitbucket** to **GitHub** migration and early practices around **GitHub Copilot** as a development assistant.

Product, data & delivery

- Owned the technical roadmap: architecture decisions, technology trade-offs, debt prioritisation, tooling choices and de-risking medium-term delivery.
- Actively contributed to **Product / Data / Tech** trade-offs with the CPO and Data team.
- Clarified requirements, estimated, prioritised, chose tooling, ran POC/MVP and coordinated delivery.
- Regularly challenged requirements, proposed alternative technical or functional solutions and broke down scope to ship smaller, faster, safer increments.
- Contributed to **AWS** infrastructure improvement and coordinated with external teams responsible for infrastructure audit and optimisation.

Results:

- Production capacity increased through the progressive industrialisation of previously manual or scattered workflows.
- Dependency on legacy tools and individual knowledge reduced, the ecosystem now well-controlled across the whole team.
- Data quality and reliability improved through automated sync between internal and external tools.
- The company's ability to launch and maintain new services strengthened by a shared **NestJS/TypeScript** foundation.
- Staff turnover reduced, thanks to more reliable internal tools.

Kaliz is a proptech specialising in rental management, founded in late 2019. With around fifty employees in Toulouse, Paris and Nantes, it has raised over €22M and manages several tens of thousands of units across around a hundred cities, with a target of 50,000 units by 2027.

Tech Lead Angular on a critical real estate management application (**Nx** monorepo, ~80,000 lines of **TypeScript**, 650+ components), the backbone of business operations for around thirty users.

Held technical frontend responsibility while remaining heavily involved in development, refactoring and structural topics.

Key skills: **Angular** · **Technical Leadership** · **Code Review** · **Technical Debt Reduction** · **CI/CD** · **TypeScript strict** · **RxJS** · **NgRx** · **Nx** · **GitLab CI/CD** · **Cypress** · **Playwright** · **API Contracts** · **Swagger**

Impact: took ownership of a critical frontend, progressively reduced technical debt and improved the team's capacity to deliver reliable updates.

Environment : Angular, TypeScript strict, RxJS, NgRx, Nx, HTML, CSS, Git (Gitlab), Docker, Notion, Cypress / Playwright, Prettier, GNU/Linux

Hands-on development

- Developed structural frontend topics: refactoring, complex components, business-driven updates, library upgrades and continuous improvement of the **Angular** foundation.
- Took ownership of a complex **Angular** frontend with debt impacting code readability, the quality of new features and delivery capacity.
- Worked on an application rich in forms, tables, business flows and frontend/backend interactions.
- Fixed bugs, improved application behaviours and progressively hardened critical paths.

Technical leadership & quality

- Led 4 to 5 frontend developers: code review, coaching, best practice dissemination, technical trade-offs and upskilling support.
- Ran agile rituals as Scrum Master: daily, sprint planning and retrospectives.
- Ran a deep code audit and defined an **improvement roadmap** over several months.
- Aimed to reduce debt, improve maintainability and strengthen the team's capacity to evolve the application.

- Owned the **frontend technical roadmap**: debt prioritisation, architecture decisions and migration planning.
- Made quality/timeline trade-offs and secured CTO validation on structural topics.
- Progressively strengthened **frontend quality**: **TypeScript strict**, strict **ESLint**, development conventions.
- Ran structured code reviews, promoted **Angular/RxJS** best practices and kept libraries current.

Architecture & delivery

- Introduced **Nx** and schematics to standardise recurring component generation, speed up refactoring and improve developer experience.
- Introduced **NgRx** to centralise application state, clarify complex business logic, reduce bugs from inconsistent states and limit unnecessary backend calls.
- Set up an end-to-end test foundation with **Cypress / Playwright** on essential business paths, particularly around lease creation and rental management.
- Improved **GitLab CI/CD**, deployment processes and frontend delivery reliability.
- Improved **frontend/backend collaboration** through clear interface contracts (**Swagger**).
- Aimed to reduce API/frontend discrepancies, limit back-and-forth and make the codebase more reliable.
- Collaborated with product and users to clarify requirements, refine tickets, plan scope, propose UX/business improvements and accelerate feature delivery.

Results:

- Ability to evolve the critical application preserved, thanks to reduced frontend debt.
- Regression risk reduced on sensitive business flows, through automated end-to-end tests.
- Business needs better scoped before development, through closer collaboration with product.
- Team made more autonomous on **Angular, RxJS**, code review and day-to-day technical trade-offs.

Canal+ (Omnilog)

Jan 2012 — Sept 2015

Fullstack developer then technical lead

Paris

The Canal+ Group is a major international audiovisual player, present in more than 70 countries and counting around 40 million subscribers, with revenue of €6.26bn in 2025.

Fullstack developer then technical lead on Canal+ interfaces for set-top boxes and web platforms, in a mission-critical context with high availability, high user volumes and strict multi-platform constraints.

This long engagement built a solid production culture: performance, resilience, monitoring, cross-team coordination, high-stakes releases and large-scale operations.

Key skills: **PHP · MySQL · High Availability · Technical Coordination · Release Management** · HTML/CSS · AngularJS · NoSQL · Monitoring · Linux Servers · Accessibility

Impact: built a strong production culture on a mission-critical, very high-volume application, with high-stakes releases, monitoring, cross-team coordination and high-availability constraints.

Environment : PHP, Smarty, HTML, CSS, JavaScript, MySQL, NoSQL, AngularJS, SVN, Git, Redmine, Trello, Jenkins, Jira, Confluence, Windows, GNU/Linux, Apache, Httpd, Nginx, Akamai, Amazon (AWS)

Progression: initially a fullstack **PHP/Smarty** developer, then technical lead and cross-team coordinator across environments, releases and structural technical projects.

Development & production

- Developed and maintained **PHP/Smarty**, JavaScript, HTML, CSS and MySQL applications for Canal+ across set-top boxes, web, smartphone and tablet.
- Served thousands of users in normal usage.
- Handled peaks reaching **several hundred thousand simultaneous users**, and **several million during major events**.
- Met strict performance, availability, accessibility and multi-language constraints.
- Ensured compatibility with heterogeneous hardware, sometimes with very tight technical limitations.
- Developed key business features around programme navigation, recording and resuming playback.

Coordination & delivery

- Supported the project manager cross-team: coordination with Product, QA/Validation, Infrastructure and management teams.
- Coordinated test and release phases: bug tracking, prioritisation of fixes, authoring of release notes.
- Orchestrated release-day steps and communicated directly with Infrastructure and QA teams.
- Managed development and validation environments: dev environments, test servers, a fleet of approximately 30 set-top boxes, platform reference tracking and environment availability.
- Supervised high-stakes releases on a distributed architecture of approximately **24 servers**: progressive deployments and monitoring follow-up.
- Ran testing phases, rollbacks and emergency hotfixes when needed.

Technical projects & lead

- Led the migration from 32-bit to 64-bit servers: technical scoping, POC, application adaptations, test coordination, cross-team follow-up and production rollout.
- Led the SVN to Git migration, with rapid ramp-up and team support on new versioning practices.
- Ramped up on **AngularJS** (then emerging) to prepare Canal+'s future platform.
- Discovered and integrated the APIs provided by various set-top boxes and internet boxes to adapt interfaces to the technical constraints of each environment.
- Collaborated regularly with QA on test case authoring, bug tracking, fix prioritisation and release reliability.
- Monitored application and server health, prepared weekly health reports and contributed to continuous improvement of production practices.
- Mentored new joiners on the legacy application, environments, release processes and coordination with external teams.

Results:

- Service continuity preserved on very high-traffic interfaces, through progressive deployments, monitoring and rollback procedures.
- Commercial and reputational risk of releases reduced, through close coordination between Product, QA and Infrastructure.

- Infrastructure longevity strengthened by the 32-bit to 64-bit migration, carried out without major disruption.
- New developers ramped up faster on the application and its release processes.

Florian Lefevre Consulting (Florian Lefevre Consulting) Full-stack Engineer

Sept 2019 — Apr 2021
Toulouse / remote

Full-stack Engineer, freelance, across three engagements with varied stacks.

Key skills: **Full-Stack Development** · **Angular** · **Code Audit** · **Autonomy** · **Rapid Onboarding** ·
PHP/Symfony · Odoo · Python · TypeScript strict · Highcharts · Fixed-Price Delivery

Impact: demonstrated rapid adaptability across three very different stacks and contexts (**Angular**/telecom legacy, **PHP/Symfony**, **Odoo/Python**), working fully autonomously on each engagement.

Environment : Angular, PHP, Symfony, Odoo, Python, TypeScript strict, HTML, CSS, Git, GitHub, Redmine, Jira, Docker, GNU/Linux

LivingObjects — Senior **Angular** Developer (Sept 2019 – Mar 2020)

LivingObjects is a Toulouse-based software vendor specialising in network analytics and monitoring for telecom operators, with a platform able to monitor millions of devices at Tier 1 operators. After divesting part of its activities to US-based LiveAction in 2017, the company continued developing several monitoring products.

My responsibilities:

- Developed and maintained **Angular** modules within an existing application, integrated into a legacy **PHP** foundation (consistency, maintainability) — including unblocking a sensitive integration.
- Ran code audits, code reviews and identified improvement areas on problematic frontend topics.
- Mentored the team on **Angular** best practices, **TypeScript strict**, **ESLint**, development conventions and component structuring.
- Built dashboards with **Highcharts**: charts, tables, advanced parameters and aggregated data output.
- Managed small frontend projects: effort estimation, specifications, development and delivery.
- Worked autonomously on assigned tickets, with regular collaboration with the backend team.

Results:

- Improved developer experience, fewer bugs and smoother onboarding.

- Frontend quality and consistency strengthened through audits, code reviews and shared conventions.
- Reduced risk of further debt on new developments, thanks to stricter practices.
- Team made more autonomous on **Angular**, **TypeScript strict** and component structuring.

Joorney — Fullstack **PHP/Symfony** Developer (short engagement)

Joorney is an international company specialising in business plan writing for immigration cases, present in the United States and France.

My responsibilities:

- Developed in **PHP/Symfony** on a business plan generation application, with rapid ramp-up on the existing codebase.
- Audited existing code and identified technical improvement areas.
- Fixed bugs and improved application behaviours.
- Delivered functional enhancements within the existing scope.

Results:

- Value delivered quickly despite a short engagement, thanks to fast ramp-up and an effective technical audit.
- Application maintainability improved in a short, operational engagement.

Scopea — Fullstack **Odoo** Consultant (recurring fixed-price engagement, alongside the two engagements above)

Scopea is a Toulouse-based cooperative and **Odoo** Gold partner, specialising in the integration and custom development of the **Odoo** open-source ERP for very small businesses and SMEs.

My responsibilities:

- Ramped up rapidly on the **Odoo** ecosystem and **Python/HTML/CSS** development, on an initially unfamiliar stack.
- Developed, improved and maintained **Odoo** modules to adapt the ERP to specific business processes (e.g. an industrial work-order tracking module).
- Delivered bug fixes, new pages, functional enhancements and full modules to meet client requirements (dozens of end clients, very small businesses and SMEs).

- Gathered requirements, defined the technical solution, estimated effort and prepared quotes.
- Owned the assigned scope fixed-price, end to end: design, development, QA, production delivery and follow-up.
- Worked alone or in a pair with a Scopea developer, ramping up quickly in autonomy on assigned topics.
- Proposed technical solutions to work around standard **Odoo** limitations when business requirements demanded it.

Results:

- Rapid ramp-up on an ecosystem (**Odoo/Python**) that was entirely unfamiliar at the start.
- Reliable fixed-price delivery despite a V-model context with no agile practices, across dozens of clients of varying sizes.
- Full autonomy reached quickly, after an initial period working in a pair.

LiveAction (Florian Lefevre Consulting)

Oct 2017 — Mar 2019

Senior Angular developer

Toulouse

LiveAction is a US software vendor (Palo Alto), founded in 2007 and specialising in network performance monitoring and analytics, used by more than 750 enterprises. Its Toulouse entity stems from the 2017 acquisition of LivingObjects' monitoring business.

Senior developer on a network monitoring web application, as part of a structural **AngularJS** to **Angular** migration.

The engagement consisted of modernising the frontend foundation, overhauling development practices and improving the maintainability of an application rich in dashboards, reports and data visualisation.

Key skills: **Angular** · **TypeScript strict** · **RxJS** · **Data Visualization** · **PDF Generation** · **ESLint** · **Highcharts** · **D3.js** · **Docker** · **Java**

Impact: made a major contribution to the **AngularJS** to **Angular** migration and standardised frontend practices on a complex network monitoring application.

Environment : Angular, AngularJS, TypeScript strict, HTML, CSS, Java, Git (Gitlab), Trello, Jira, Docker, GNU/Linux, Nginx

- Made a major contribution to the **AngularJS** → **Angular migration**, carried out on a substantial application with around fifteen modules, fifty pages and several hundred

components.

- Rolled out **TypeScript strict**, **ESLint** and **Angular/RxJS** conventions to strengthen type safety, reduce errors and improve code readability.
- Built and maintained customisable dashboards with **Highcharts** and **D3.js**, integrating charts, tables, advanced parameters and aggregated data output.
- Contributed to customisable PDF report design and print modules, with consistent rendering constraints across web display and export.
- Worked on data-rich interfaces, with attention to display performance, visualisation relevance and user experience.
- Ran systematic code reviews, shared best practices and supported the team on **Angular**, **RxJS** and **TypeScript strict**.
- Set up Docker to simplify the development environment.
- Took on occasional **Java** development to support the backend team.
- Worked in an agile environment, with strong autonomy on assigned tickets and regular collaboration with the backend team.

Results:

- Faster loading and reduced technical debt, on an application rewritten on solid foundations.
- Fewer bugs and better maintainability, thanks to **TypeScript strict** in place from day one.
- Lower future maintenance cost and hiring friction, thanks to a modern, more standardised **Angular** foundation.
- Faster fixes and easier onboarding on the migrated areas, thanks to a more consistent architecture.
- Product longevity strengthened, without committing to a risky full rewrite.

LivingObjects (Ausy)
AngularJS developer

Oct 2015 — Oct 2017
Toulouse

Engagement carried out through Ausy, an international high-tech consulting and engineering group, at LivingObjects — a Toulouse-based software vendor specialising in network analytics and monitoring for telecom operators, with a platform able to monitor millions of devices at Tier 1 operators.

Frontend developer on a network monitoring web application in **AngularJS**, used by several hundred users, with strong constraints around data visualisation, performance and output as customisable dashboards and reports.

My responsibilities:

Key skills: **AngularJS** · **Data Visualization** · **Highcharts** ·

JavaScript · HTML · CSS · Dashboard Development · PDF Generation · Autonomy · Fast Learning

Environment : AngularJS, TypeScript, HTML, CSS, Trello, Git (Gitlab), Redmine, Jira, GNU/Linux, Nginx

- Developed and maintained an **AngularJS** application within an experienced frontend team.
- Built customisable dashboards integrating **Highcharts** charts, tables and advanced configuration forms.
- Built the schedulable PDF report design module, with consistent rendering constraints across web display and export.
- Developed frontend features on complex aggregated data, seeking the most appropriate visualisation format for each use case.
- Worked on data-rich interfaces, with attention to display performance, visualisation relevance and user experience.
- Handled small topics autonomously: requirement analysis, estimation, specification, development and delivery.
- Collaborated regularly with the backend team on cross-cutting topics and data exchanges needed for visualisations.
- Ramped up rapidly on **AngularJS**, unit testing, frontend best practices and maintainable development principles in a demanding environment.

Results:

- Complex data made more accessible through customisable Highcharts dashboards.
- Recurring report production automated with a schedulable PDF design and generation module.
- Product reporting capability extended to more varied, configurable outputs.

INRIA

May 2011 — Oct 2011

SOA / IoT research intern

Lille

Inria is the French national research institute dedicated to digital science and technology.

Six-month intern within the ADAM team at INRIA, on the topic *Bridging Software-Oriented Architecture with the Internet of Things*, focused on modelling CBRN crisis procedures using a SOA/SCA approach and BPEL orchestration.

Key skills: **Research** · **SOA** · **BPEL** · SCA · Prototyping · IoT · NRBC

- Carried out research, modelling and technical prototyping in several languages.
- Analysed crisis procedures and modelled a system where each component represented an actor or entity involved in emergency management.
- Used **SCA** to structure components and **BPEL** to orchestrate interactions between actors.
- Wrote a detailed internship report: state of the art, architecture, crisis processes and experimentation findings.

EADS Cassidian

Jun 2010 — Oct 2010

Java/J2EE engineering intern

Colomiers

EADS, now Airbus, was one of the world's leading aerospace, space and defence groups. Cassidian was its defence and security division.

Engineering intern at EADS Cassidian, working on the design and development of a **Java/J2EE** web documentation platform.

Key skills: **Java** · **J2EE** · **Technical Documentation** ·

HTML/CSS · jQuery · Software Design · Database Modeling · Architecture Diagrams

- Developed the application in **Java/J2EE**, HTML, CSS and jQuery.
- Contributed to application design and feature structuring.
- Produced the internship report, architecture diagrams, database diagrams and technical documentation.

Junior enterprise EISTI

Web developer

2008

Pau

The EISTI Junior Enterprise (now CY Tech) let students carry out assignments for real client companies.

Web developer on client projects carried out through the EISTI Junior Enterprise, building client sites in **PHP**, HTML, CSS, vanilla JavaScript and jQuery.

Key skills: **PHP · Web Development · HTML/CSS** · jQuery · Website Development

- Developed a website in **PHP** for a travel agency.
- Developed a showcase site for a glazing company, in **PHP**, HTML, CSS and jQuery.
- Delivered a first client experience: web integration, adapting to requirements and delivering simple sites.

EDUCATION

- **2011** - Engineering degree in Mathematics and Computer Science, EISTI, École Internationale des Sciences du Traitement de l'Information, Pau.
- **2009** - Bachelor's degree in Mathematics and Computer Science, University of Cergy-Pontoise, in partnership with EISTI.
- **2007** - Intensive English language course, Alpha College of English, Dublin, Ireland.
- **2006** - Scientific Baccalaureate, engineering sciences option, mathematics specialisation, honours (mention AB), Lycée International de Colomiers.

PERSONAL PROJECTS & EXPERIMENTS

Homelab

Set up an experimental homelab to test architectures, automate deployments and host personal services with an Infrastructure as Code approach.

Environment: Proxmox, Terraform, Ansible, GNU/Linux.

AI tooling

Experiments with AI agents and [Claude Code](#) / [GitHub Copilot](#) workflows for writing assistance, code review and technical task automation.

Environment: Claude, ChatGPT, Github Copilot.

Slow-motion film editing application

Volunteer frontend development ([Vue.js](#)) for a slow-motion film creation application.

Environment: [Vue.js](#), HTML, CSS, [GitHub](#), Docker, GNU/Linux.

Wedding website

Built a site with authentication, attendance form and data extraction scripts to Google Sheets.

Environment: React, [Node.js](#), HTML, CSS, Git, Docker, [AWS](#), [Firebase](#), GNU/Linux.

ADDITIONAL INFORMATION

- Professional English, TOEIC 780, experience in international teams.
- Motorcycle (A) and car (B) licences, personal vehicles.

INTERESTS

- Community involvement: treasurer and active member of the Air-EISTI association for 4 years.
- Scuba diving, level 2.
- Squash
